

Puzzle Game Prototype

Investor Pitch Presentation

Eren Başpınar
Gameplay Programming & Interaction Systems

Project Overview

A puzzle-focused prototype built around interaction and progression.

CORE IDEA

A puzzle-based game prototype focused on player interaction, exploration, problem solving and level progression.

STATUS

Group game project
Currently in development
Project title and story details are not shared yet

Interaction-driven gameplay: the player discovers a locked gate, searches for the right item and unlocks progression.

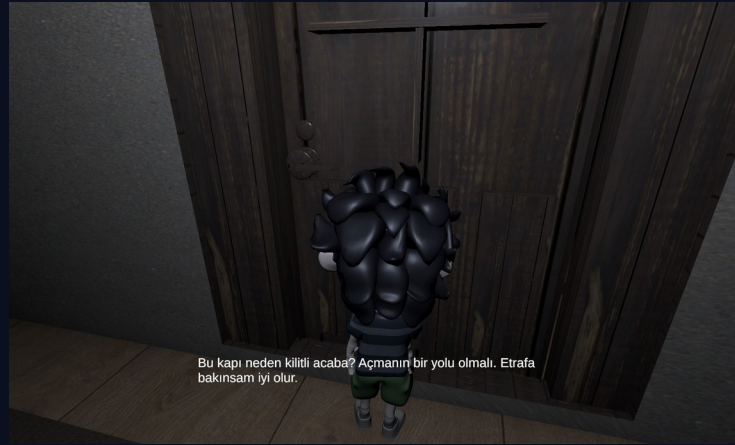

Gameplay Flow

The prototype demonstrates a clear loop: explore, interact, progress.

1. Explore

The player enters the environment and discovers interactable objects.

2. Identify

A locked interaction blocks progress and creates a puzzle goal.

3. Progress

The correct interaction triggers a door system and unlocks the path.

GAMEPLAY LOOP

Explore -> Interact -> Unlock -> Continue

My Contribution

Gameplay programming, scripts and interaction mechanics.

ROLE

In this group project, my main contribution focuses on gameplay programming and script implementation.

IMPLEMENTED SYSTEMS

- Key collection mechanics
- Locked door interaction
- Door opening systems
- Puzzle-related gameplay events
- Basic in-game trigger logic

The interaction system turns level objects into functional gameplay elements.

Social Media Content Summary

Connected platforms and how the project is presented.

GitHub

Showcase repository with README, screenshots and investor pitch file.

<https://github.com/ErnBpnr/Unity-Interaction-System-Showcase>

Instagram

Carousel post summarizing gameplay interaction and progression screenshots.

Instagram post link will be added after posting

YouTube Shorts

Short gameplay video presenting the interaction mechanic in action.

YouTube Shorts link will be added after posting

CONTENT STRATEGY

The same prototype is adapted for each platform: documentation on GitHub, visual storytelling on Instagram, and motion showcase on YouTube Shorts.

Support Goal

What investment or support would improve next.

DEVELOPMENT NEEDS

- Prototype polish and bug fixing
- Additional puzzle and interaction systems
- Level expansion and pacing improvement
- Visual and sound feedback improvement
- Playable demo preparation

The goal is to turn the current interaction prototype into a more complete playable puzzle experience.

Next step: build a polished demo that highlights the core mechanic and communicates the game vision clearly.
